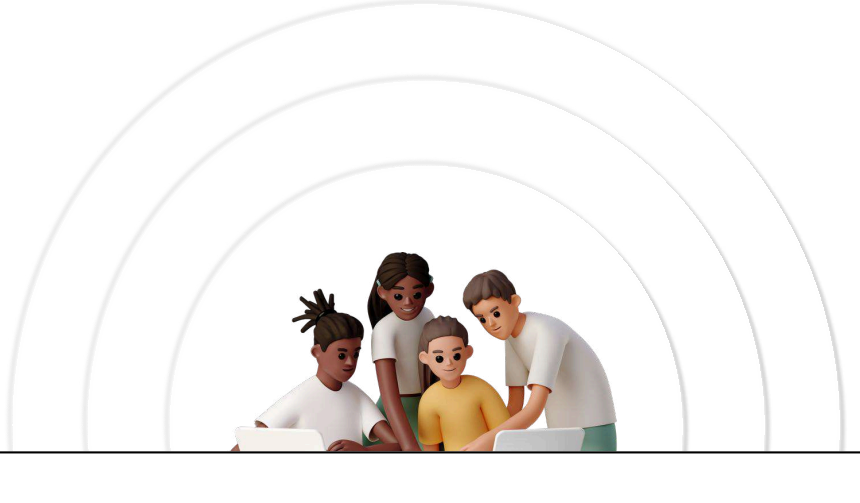
Case Study

Shuffle Music App

Huge music is available for
you to listen to wherever
you are with your friends
and enjoy every song
without interruption.



About the Project

Shuffle is an app that allows you to quickly select the perfect song for every situation on your phone, iPad, and other devices. You may make an infinite number of playlists, share them with your friends via an app, and talk with them while doing so. You can even make your own tracks and publish them using the app.

Problem Statement

At the moment, there isn't a specific platform for artists to display their ability in order to get recognised and linked with others worldwide depending on their interests. Young innovative artists are unable to receive the proper compensation for their creations.

- A specific platform is needed for artists from different backgrounds who want to display their talents.
- You may share tunes with friends and interact with them on any platform.

Potential Solution

Shuffle brings the whole entertainment industry together under one roof. A n online music sharing service where you may register and submit your music. Join forces with global allies that share your interests.

One may communicate with friends and artists whose songs they enjoy and wish to cooperate with. One may also share the recordings with friends.

Design Strategy

Design thinking's technique for organizing information so that it is consistent with the overarching aims and objectives of the company includes design strategy. It combines business strategy, user demands, profitability, and other factors.

Executive Intent

- Platform for creatives around the world to exhibit their work.
- Long term goal of the project is to make it easy for upcoming artists with talents to find the route in their passion and achieve what they dreamt of.

Target Audience

As audiences grow enormously, the entertainment sector is relocating to digital channels. We are focusing on people between the ages of 21 and 24.

General Task

- Upload Tracks.
- Share playlists/tracks within app.
- Chat with your Friends.
- Make unlimited playlists.
- Listen tracks without Ads.

Cross Channel

- iOS
- Android
- Website

Major Competitors

Spotify
Prime music
Wynk
Ganna

Competitive Analysis'

A detailed report on our competitors was considered. A survey evaluated the pros and cons of the services provided.

App Features	Shuffle	Spotify	prime	Wynk	Ganna
Unlimited tracks	✓	✓	✗	✓	✗
Unlimited Playlist	✓	✓	✗	✓	✗
Chat with Friends	✓	✗	✗	✗	✗
Share track with friends	✓	✗	✗	✗	✗
Upload Tracks	✓	✗	✗	✗	✗
Track Finder	✓	✗	✗	✗	✗
Notification	✓	✗	✗	✗	✗

User Research

Research Insights

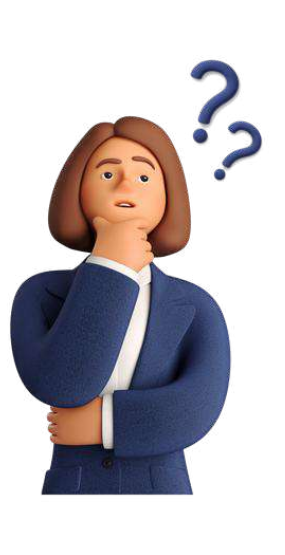
- For making playlist have to pay.
- There is no way to send the whole playlist in one click to your friends and can chat with them.
- Artist can't upload there tracks and showcase their skills,.

User Interview

Qualitative Research

We interviewed 15 people from different areas of Entertainment to understand the problem they were facing while listening to music. We gained some valuable insights into the process. Here are a few questions asked during the interview.

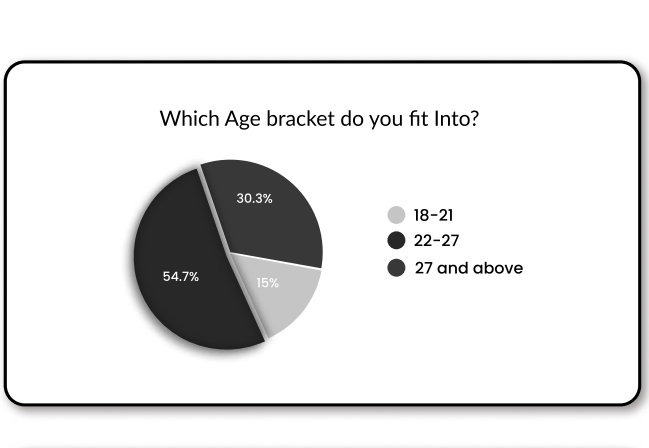
- Which music app you use for listening?
- Which kind of music you listen?
- When you listen music? Any specific time?
- One thing that you don't like in that app?
- In which age group you belong?

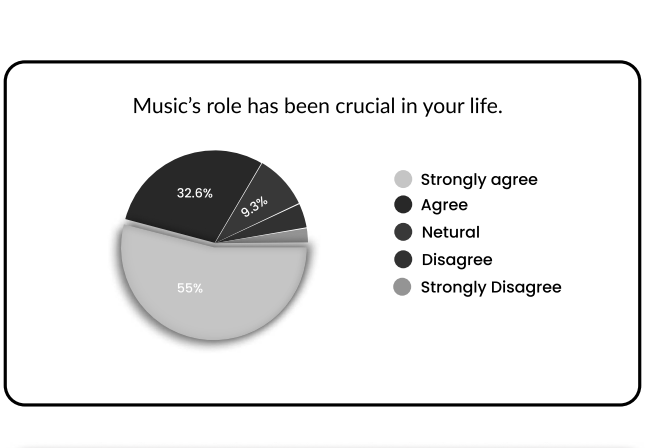


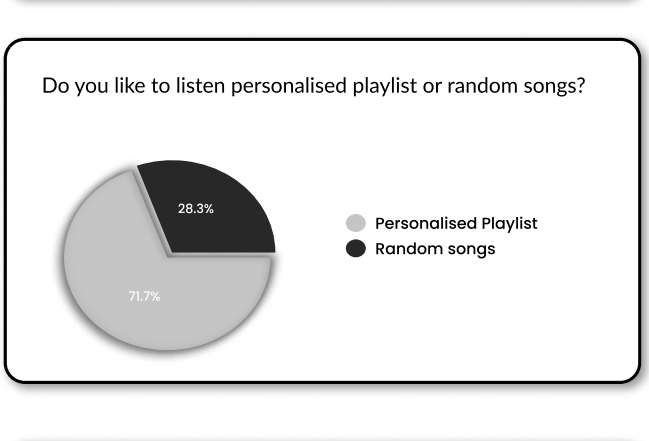
Quantitative Research

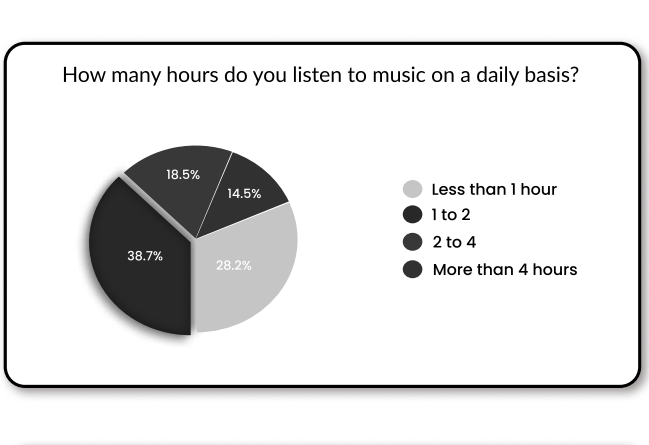
We carried out an online survey to observe any patterns or similarities the users may exhibit.

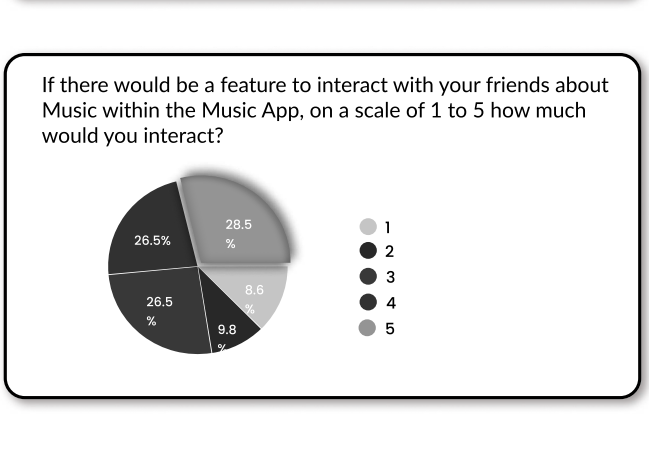
Received 353 Responses Via Google Forms

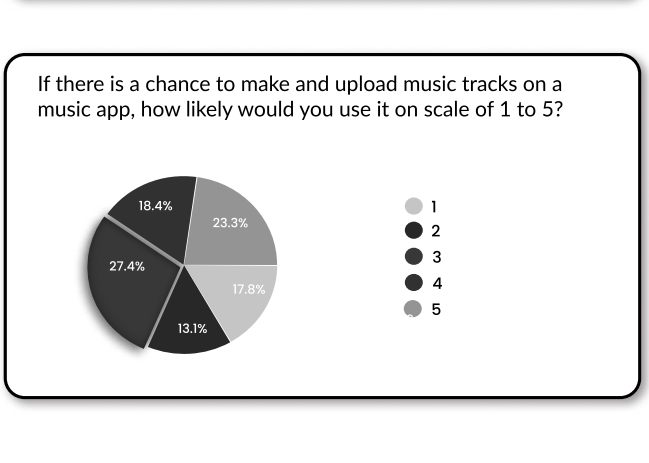


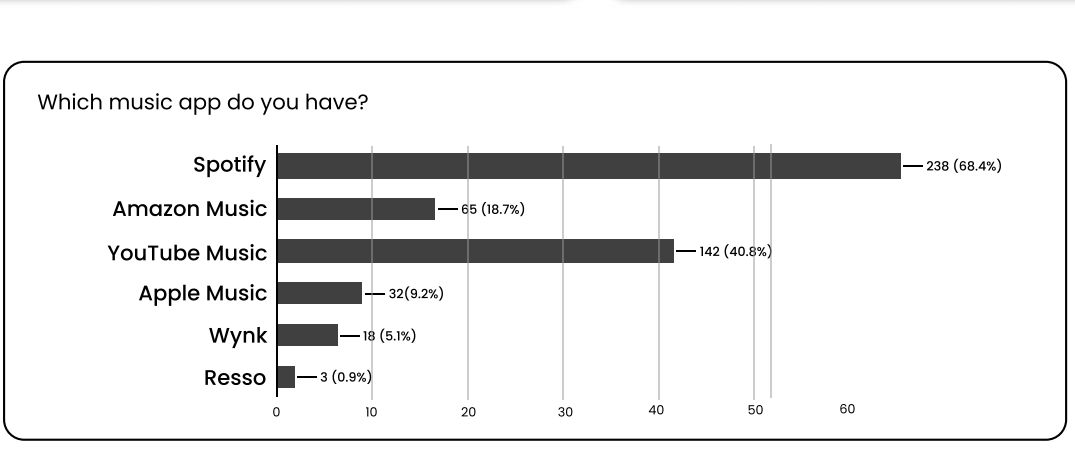


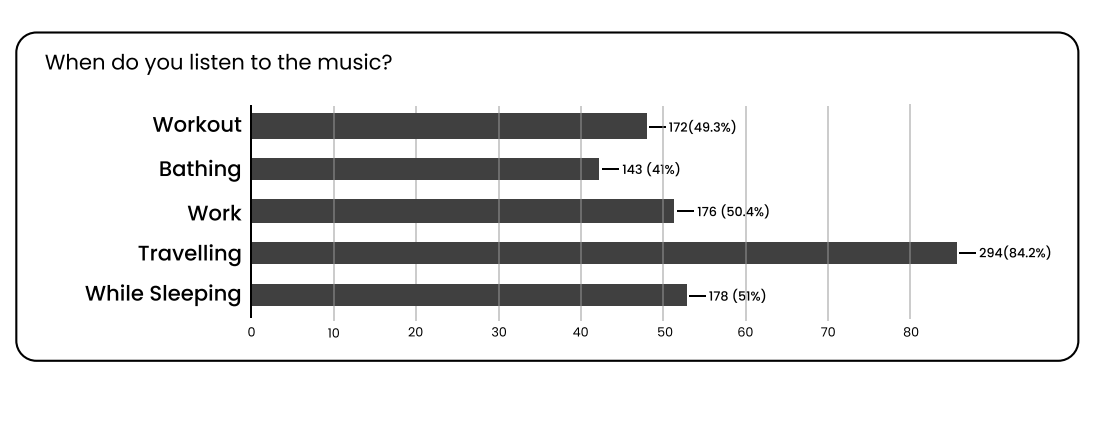






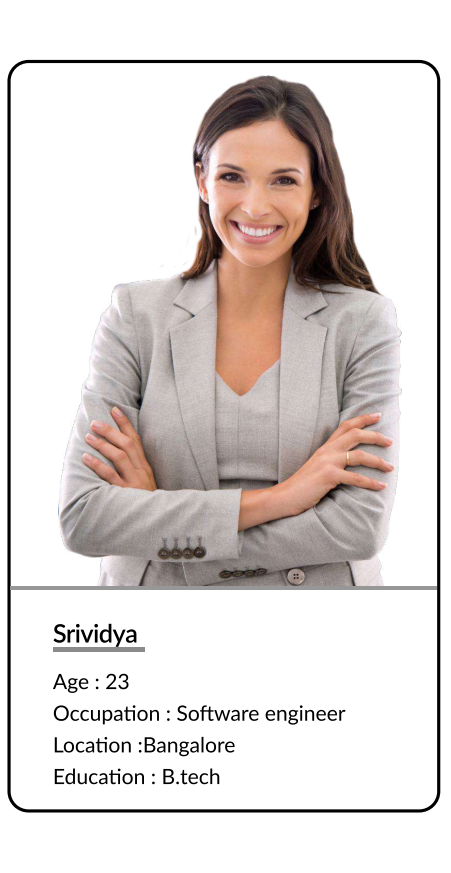






User Persona

With the data collected from the interviews and survey, I created a persona representing the ideal user of the application. Having a persona allowed me to come up with a better solution because it provided me with an in-depth understanding of the user's goals, frustrations and overall personality.



Srividya
Age : 23
Occupation : Software engineer
Location :Bangalore
Education : B.tech

" I feel unstoppable while I'm working out while listening to my favorite music through earbuds. "

Bio

Srividya is a passionate software engineer who moved to Bangalore three years ago in search of a better life. During her free time, she listens to music to unwind from her competitive environment. Listening to music while working out is one of her favorite things to do, and she also has a hidden talent for singing.

Goals

- Update playlist
- Find new track quickly
- Try out new genres of music
- Move from bathroom singing to a space where more people can hear her beautiful voice.

Pains Points

- Limited content with respect to geographical location
- Hates going to a different app to share new music with friends.
- The feeling of frustration being interrupted by Ads while listening music are unbearable

Preferred Brands

Says

- Music is very much healing.
- I can finally send music in app.
- Is this app the same as other music apps or is it the same?
- Oh I can share my vocals here.

Thinks

- Does this app have offline downloading option?
- Can I download music or is it only streaming?
- Do I have to pay for downloading the songs ?
- w do I add friends on this app?
- my songs get enough

Does

- While hitting the gym.
- Gearing up for a bike ride/ a drive.
- While about to start daily commute to work.
- Sharing music with friends.
- I'll check social Media while listening songs.

Feels

- els great to learn new artist that becomes a favourite.
- Great to meet people with similar preferences in music.
- Makes me enthusiastic.
- Feel comfortable sharing music with inner circle

User Journey Map

User journey map is graphical representation of the actions a user must take to achieve a certain goal. It focuses on what feelings accompany the user and what improvements can be made to improvement the user's experience.

Opportunities	Can search them up and listen to their music and you can add them as your fav and get notified regularly.		By adding the hashtags on music, user can easily find new uploaded tracks.	Invite and Earn points

User Flow

A user flow is a visual representation the user to map out each and every step the user takes from the entry point right through the final point. User flow is helpful for we to understand how a user navigate through the app and what decision can they possibly make, and complete app experience at a holistic level.

Card Sorting

Card sorting is a technique that involves asking users to organize information into logical group. After knowing the users requirements, card sorting is done to get an idea about what type of features and flow would help the users to attain their goals.

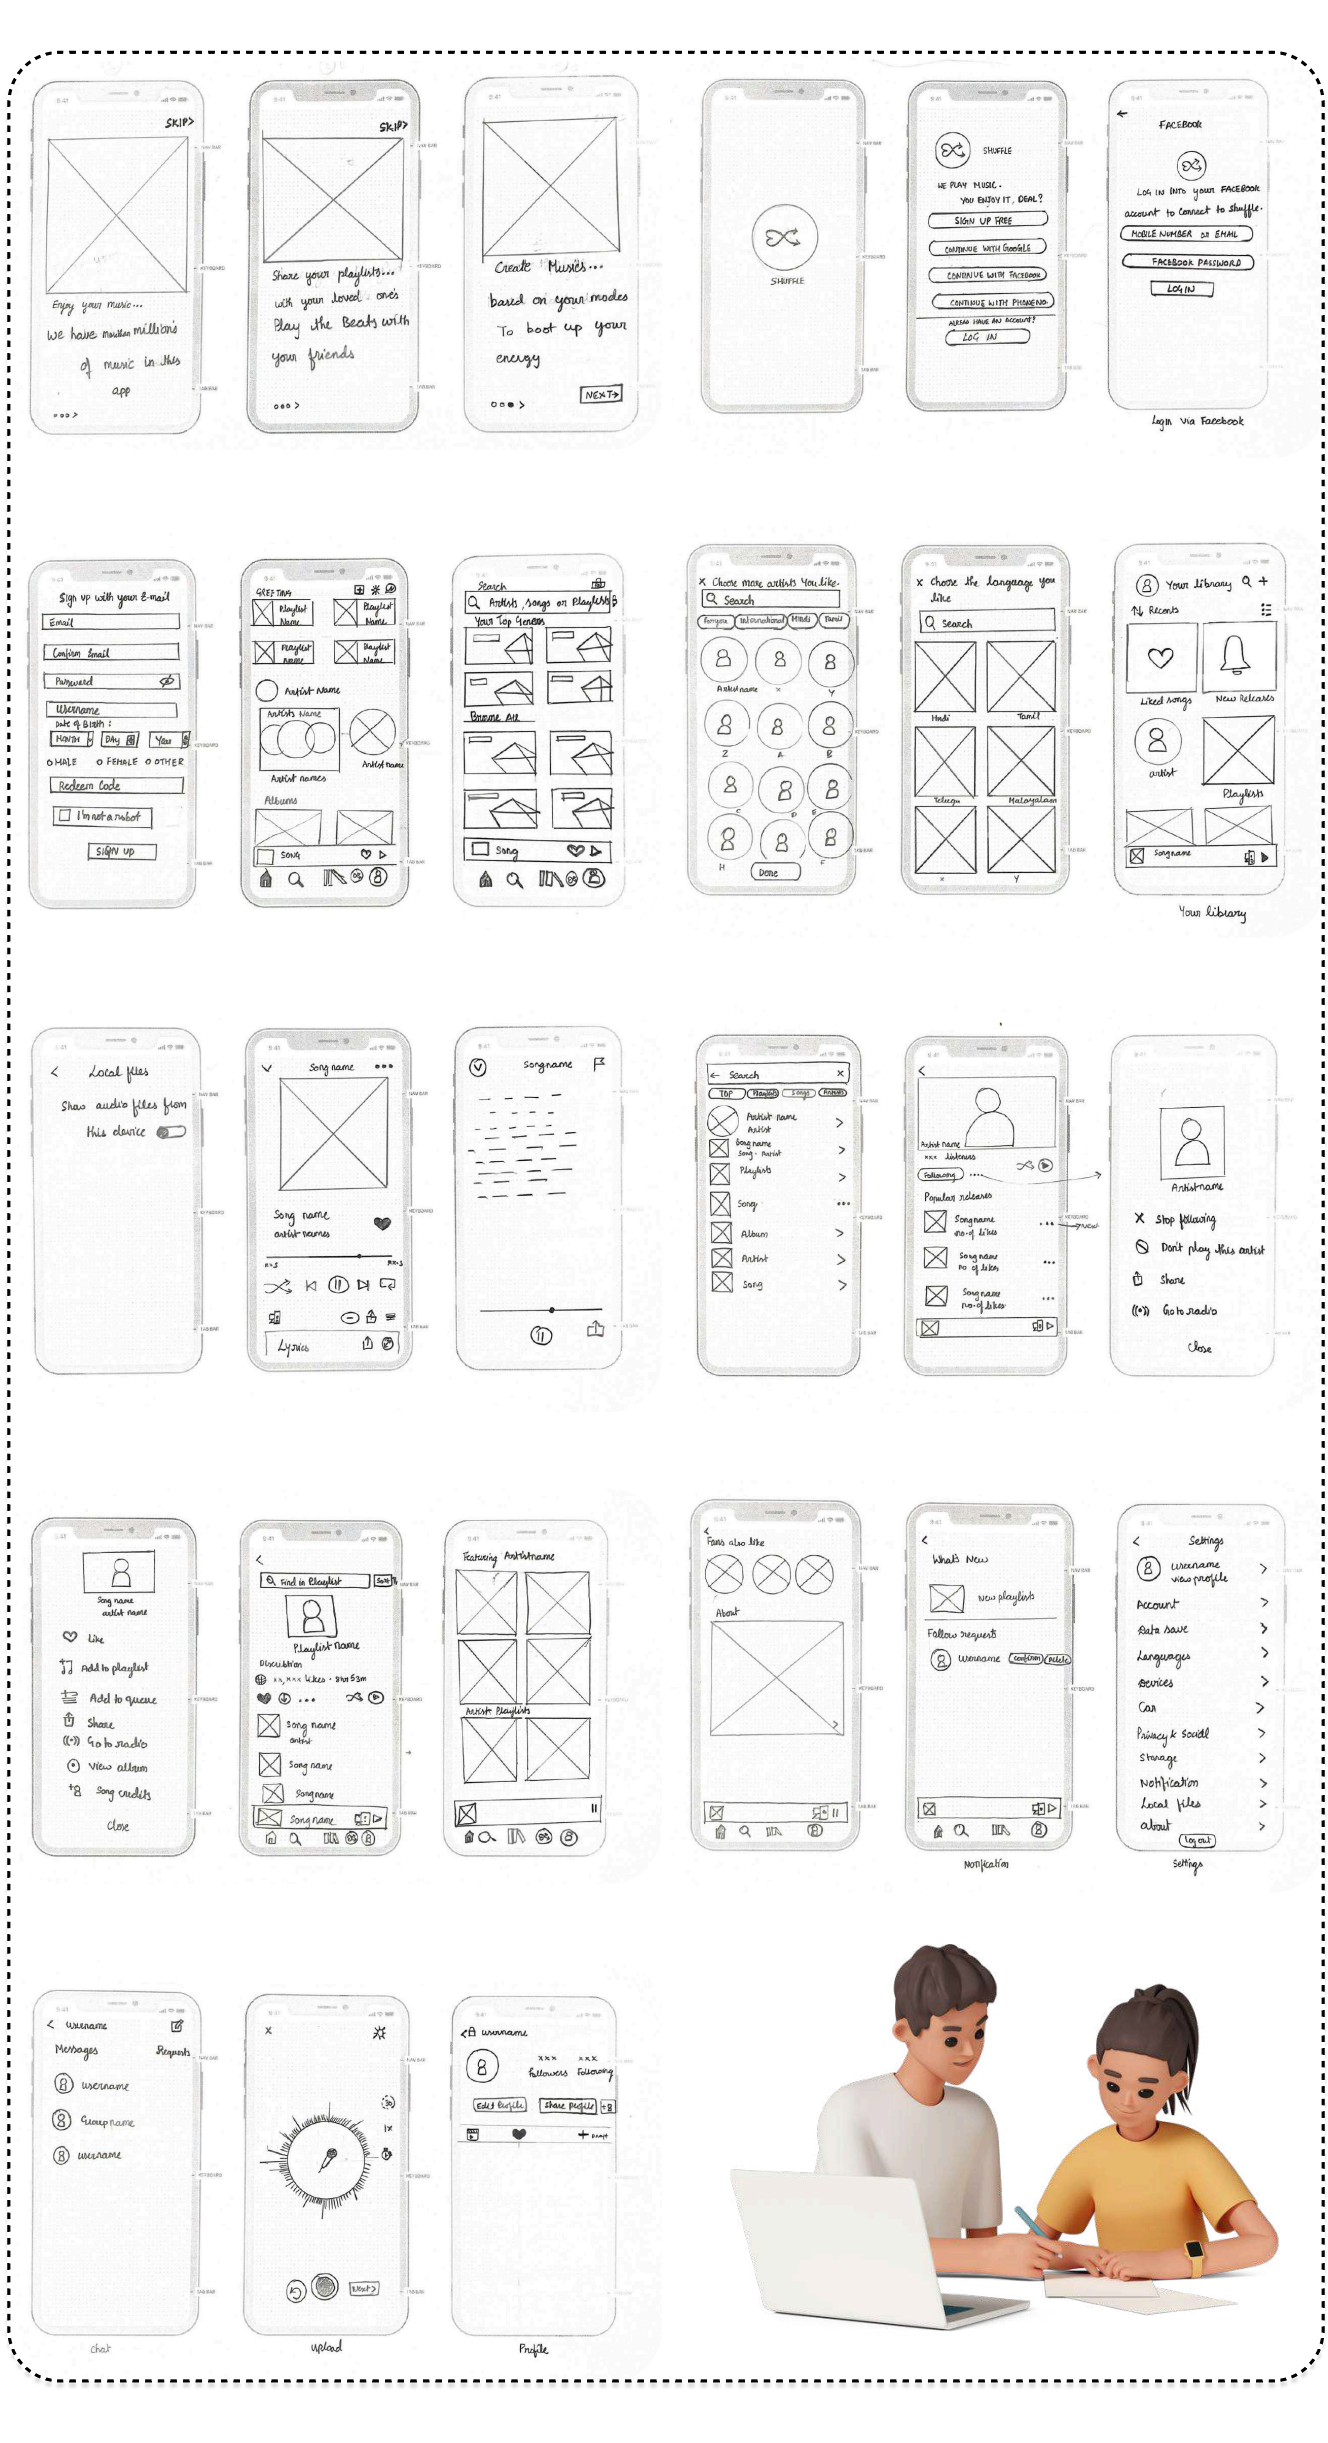
Low Fidelity

A low fidelity wireframe is the first visual representation of designer's idea. It ensures that the developers and clients get a clear understanding of the functionalities and designs that the software needs to support.



High Fidelity

At the final phases of the design process, a high fidelity captures the appearance and feel of the product. Hi-fi wireframes incorporate genuine content, fonts, colours, picture sizes and branding components in addition to placeholders and "lorem ipsum" text seen in low fidelity wireframes.
